

## K 5000

### Bundling system for herbs

This machine has been specially developed for bundling of herbs such as parsley, chives, dill, cilantro, arugula, spinach.

#### Functionality of the machine:

The different vegetables are placed on produce carriers. These produce carriers are mounted on a conveyor chain. The vegetables are carried into the binding machine and automatically bundled.

Our Creativity – Your Advantage  
INDEGA - Awards for Innovative  
products for Horticultur  
2006, 2008 and 2013

The following standard elements are used:

- Produce carriers on a stainless steel chain in combination with support belts.
- Control of the machine by a CPU
- Optical sensor for produce monitoring
- Electronic monitoring of chain system
- High performance - bundling machines
- Fixed Speed 2800 bunches / hour

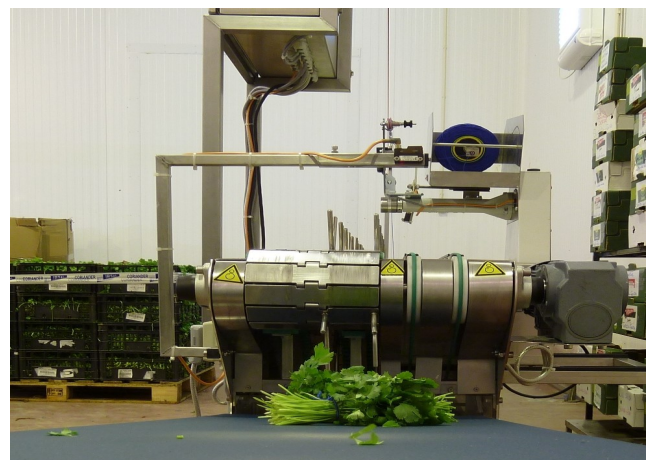

The following options can be supplied:

- Electronic speed control from 2500 -4900 bundles/ hour
- Trimming device
- Collection conveyor at end of line
- Labeling and printing device
- Softbox for low tension and consistent bundling

#### Dimensions of the machine:

Working height 700-900 mm  
In feed chain, length from 2.5 to 8.0 m  
Total length from 3.6 to 12.0 m  
Electrical connection 230 volt

Specifications subject to changes: 15.01.2017
